EDUCATION

The George Washington University | School of Engineering and Applied Science

Washington, DC

Bachelor of Science in Mechanical Engineering

Expected May 2029

Relevant Courses: Manufacturing Processes and Systems, Engineering Computations, Statics, Differential Equations, Engineering Drawing and Computer Graphics

TECHNICAL SKILLS

- **Software:** SolidWorks, AutoCAD, Microsoft Excel, Engineering Drawings, FEA, Onshape, MATLAB, Linux, Git/GitHub, Adobe Illustrator
- **Manufacturing:** Machining, Additive Manufacturing (3D Printing), Soldering, Mechanical Assembly, Power Tools
- **Programming:** Python, C++
- **Certifications:** Certified SOLIDWORKS Associate (CSWA), Lean Six Sigma Yellow Belt

ENGINEERING PROJECTS

GW Electric Yacht Club | ASNE Promoting Electric Propulsion Competition

December 2025 - Present

- Designed the boat's drivetrain and motor mounting system in SolidWorks to transfer power from the motor to the propeller.
- Performed finite element analysis on the motor mount to evaluate structural performance under expected propulsion and impact loads.
- Led 40+ hours of machine-shop fabrication, manufacturing transom mounts, brackets, supports, and structural plates for the propulsion mounting system.
- Collaborated with the team to assemble, test, and troubleshoot the propulsion and steering systems under a compressed schedule to prepare the boat for competition.

PROFESSIONAL EXPERIENCE

Undergraduate Researcher | Estimation, Perception & Intelligent Computing Lab

August 2026 - Present

- Configured a Linux environment using Python, C++, and connected GitHub repositories to calibrate cameras used for collecting robotic training data.
- Collected and reviewed camera and motion-sensor data from an EGO1GS headset using data-recording and visualization software.

Manufacturing Engineer Intern | Flowserve Corporation

May 2026 - August 2026

- Authored and updated manufacturing procedures for painting, rust prevention, shipping, sanding, and smear testing, including an approved procedure used in production.
- Interpreted industrial valve drawings to determine custom shipping requirements and evaluated test-bay enclosures for pressure capacity and safety-code compliance.
- Analyzed paint-booth emissions and air-quality data in Excel to track VOC exposure, support environmental compliance, and recommend respirator-cartridge replacement intervals.
- Collaborated with maintenance, EHS, and operations teams to plan over \$60,000 in facility and equipment upgrades through CAPEX proposals and vendor reviews.
- Improved inspection readiness and equipment tracking by documenting over 500 lifting devices and creating standardized identification labels and safety materials.

Engineering Intern | Salem-Beverly Water Supply Board

April 2025 - June 2025

- Collected water samples from 15 distribution-system locations and tested pH, turbidity, and chlorine levels to verify water-quality standards.
- Supported plant operations through equipment inspections, filter backwashing, sedimentation-basin maintenance, and safety activities to provide clean drinking water to over 90,000 people.
